

**IN THE CLAIMS:**

Please amend claim 1 as follows:

1. (Currently Amended) A power socket having an attached container comprising:  
a socket housing ~~with an extension wire, and~~ having a plurality of parallel elongated insertion openings for receiving a plug; and a single extension wire;  
a container having a solid base, two solid upwardly extending end walls and two upwardly extending side walls defining an accommodating chamber; ; and  
wherein an exterior of the socket housing forms an outer cover of the accommodating chamber by wedging and joining to an upper surface of the socket housing, and forms an elevated body by covering a lower surface of the socket housing, and wherein a portion of the exterior wire is stored in the accommodating chamber.
2. (Original) The power socket having an attached container in accordance with claim 1, wherein side walls of the container have at least one notch.
3. (Original) The power socket having an attached container in accordance with claim 1, wherein inner walls of the container have at least one flange body.
4. (Original) The power socket having an attached container in accordance with claim 1, wherein the extension wire is coiled and stored in the accommodating chamber of the container.
5. (Original) The power socket having an attached container in accordance with claim 1, wherein an outer side of the container is provided with a hook.
